

Enhanced Recovery After Surgery (ERAS) for Posterior Thoraco-Lumbar-Sacral Spine 1-3 Level Fusion/Revision

Site Applicability

Vancouver General Hospital

Pathway Patient Goals

Overall Patient Goals:

Patient will recover from surgery with an expected 4 – 6 day length of stay (LOS) and experience a safe discharge home.

Overall ERAS Goals:

- ↓ stress response to surgery
- Improve patient experience
- ↓ complications and LOS

Specific ERAS Goals:

1. Gum chewing x 15 – 60 minutes while awake, several times/day
2. DAT from POD 0
3. Discontinue CVC POD 2
4. Discontinue indwelling urinary catheter @ 06:00 POD 2 (or earlier if able)
5. Saline lock IV POD 2 or IV @ TKVO if on Patient Controlled Analgesia when drinking greater than or equal to 600mL/12hr
6. Capillary Blood Glucose T1D and HS and Sliding scale insulin as ordered. If patient non-diabetic and all glucometer readings are less than 8.1mmol/Lx24 hrs, may discontinue glucometer
7. Ondansetron 4mg IV/PO Q8H X 3 doses. First dose 8 hours after intra-op dose.
8. Mobility goals:
 - POD #1: bathroom and sitting up for meals as tolerated; Walking 20m X 2 (with PT & RN)
 - POD #2: bathroom, sitting up for 2 meals; Walking 50m X 2 (with PT & RN)
 - POD #3: bathroom, sitting up for 2-3 meals; Walking 100m X2 (with PT & RN); stairs with PT
 - POD #4, 5 and 6: bathroom, sitting up for 3 meals; Walking 100m X 2 and stairs independently

Inclusion Criteria

Elective patients undergoing Posterior Thoraco-Lumbar-Sacral Spine with 1, 2 or 3 Level Fusion or Revision.

Home Discharge Criteria

This material has been prepared solely for use at Providence Health Care (PHC), Provincial Health Services Authority (PHSA) and Vancouver Coastal Health (VCH). PHC, PHSA and VCH accept no responsibility for use of this material by any person or organization not associated with PHC, PHSA and VCH. A printed copy of this document may not reflect the current electronic version.

Patients will be deemed ready for discharge when cleared medically by the Spine Physician (i.e. incision healing, pain controlled, post-operative x-ray completed and reviewed, and medically stable).

Patient will be discharged by Physiotherapy if goals for functional mobility met.

Patient will be discharged by Occupational Therapy if goals of Activities of Daily Living met.

Instructions

1. Review pathway once per shift for patient care goals and expected outcomes (indicated in **bold**)
2. Do not document on this pathway, complete documentation in the Electronic Health Record (Cerner) or paper chart as per policy

| Day of Surgery (Post-op Day 0) | |
|--------------------------------|--|
| Category | Expected Outcomes |
