

Posterior Thoraco-Lumbar Procedure with Fusion

Site Applicability

Vancouver General Hospital

Practice Level

RN
LPN
OT
PT

Pathway Patient Goals

Overall Patient Goals:

Patient will recover from surgery with an expected 4 – 6 day length of stay (LOS) and experience a safe discharge home.

Specific Pathway Goals:

1. DAT from POD 0
2. Discontinue CVC POD 2
3. Discontinue indwelling urinary catheter @ 06:00 POD 2
4. Saline lock IV POD 2 or IV @ TKVO if on Patient Controlled Analgesia
5. Mobility goals:

POD #1: bathroom and sitting up for meals as tolerated; Walking 20m X 2 (with PT & RN)

POD #2: bathroom, sitting up for 2 meals; Walking 50m X 2 (with PT & RN)

POD #3: bathroom, sitting up for 2-3 meals; Walking 100m X2 (with PT & RN); stairs with PT

POD #4, 5 and 6: bathroom, sitting up for 3 meals; Walking 100m X 2 and stairs independently

Inclusion Criteria

Elective patients undergoing Posterior Thoraco-Lumbar-Sacral Spine Fusion or Revision.

Home Discharge Criteria

Patients will be deemed ready for discharge when cleared medically by the Spine Physician (i.e. incision healing, pain controlled, post-operative x-ray completed and reviewed, and medically stable).

Patient will be discharged by Physiotherapy if goals for functional mobility met.

Patient will be discharged by Occupational Therapy if goals of Activities of Daily Living met.

Instructions

1. Review pathway once per shift for patient care goals and expected outcomes (indicated in **bold**)
2. Do not document on this pathway, complete documentation in the Electronic Health Record (Cerner) or paper chart as per policy

Post-op Day 0	
Focus of Care	Expected Outcomes
Safety Check & Fall Risk	<ul style="list-style-type: none"> Complete bedside safety check Complete Morse Falls Scale as per Falls & Injury Prevention Guideline (D-00-07-30033): <ul style="list-style-type: none"> Not at risk: reviewed and no concerns
Pain	<ul style="list-style-type: none"> Complete Pain assessment as per Pain Assessment and Documentation Standards (VCH.VA.0203) Review pain management, use of PCA, breakthrough doses, oral medications and side effects with patient Provide teaching pamphlets to patient – Pain Control after Surgery and PCA Pain rating ≤ 4 and at a level acceptable to patient and does not prevent participation in mobility and ADLs
Neuro/Cognition, Delirium, Sleep	<ul style="list-style-type: none"> Complete delirium assessment as per Delirium: Screening, Assessment and Management (CAM) DST (BCD-11-07-40081) or Intensive Care Delirium Screening Checklist <ul style="list-style-type: none"> Notify Physician and Initiate Care Plan if CAM positive for Delirium Patient alert and oriented X 3 No Evidence of Delirium Slept at least 4 hours at night
Motor and Sensory Function	<ul style="list-style-type: none"> Complete ISNCSCI assessment as ordered on admission from PACU Repeat ISNCSCI assessment in 4 hours then Q shift if stable Notify Spine Surgeon of NEW or INCREASED DEFICIT Motor/sensory assessment within normal limits or patient's baseline
Respiratory: PE	<ul style="list-style-type: none"> Assess RR & SS as per Pain Assessment and Documentation Standards (VCH.VA.0203) while receiving IV opioid O₂ at 2 – 4 L/min via nasal prongs X 48 hours while on PCA Encourage deep breathing and coughing exercises Q1H while awake Respirations easy and regular, breath sounds clear, SpO₂ > 94%
Cardiovascular: DVT	<ul style="list-style-type: none"> VS as per Vital signs and observation: Post-op monitoring DST (D-00-07-30113) Complete IV/CVC site(s) assessment as per IV Therapy, Peripheral: Insertion, Care and Maintenance DST (BD-00-12-40080) or Non-Tunneled Central Venous Catheter (NT-CVC) – Basic Care and Maintenance DST (BD-00-12-40045) Encourage active leg movement and ankle pumping SCD to both legs X 24 hours Post-Op (Remove Q shift X 20 minutes) VS within normal limits No evidence of DVT
Anemia	<ul style="list-style-type: none"> Review estimated OR blood loss Assess hemovac drainage Hgb within acceptable limits Notify spine resident if Hgb < 80g/L or drops by ≥ 20 g/L from baseline or if patient symptomatic
