

Group and Screen Sample Collection: Patient Identification, Specimen Collection and Labeling

Site Applicability

PHC Acute Care Sites

Practice Level

Registered Nurses (RNs)*, Registered Psychiatric Nurses (RPNs)*, Licensed Practical Nurses (LPNs)* at **SPH ONLY**, Nurse Practitioners (NPs), Physicians, Perfusionists, Anesthesia Assistants (AAs), Medical Laboratory Technologists (MLTs) and Medical Laboratory Assistants (MLAs)

*RNs/RPNs must have completed advanced training (e.g. critical care training or CVC blood draw competency; consult department educator)

Requirements

- 1. A provider order is required for the collection of a Group and Screen.
- Identification bands are required for the collection of a Group and Screen and all efforts should be made to band the patient. If the patient cannot be banded or refuses to be banded a Group and Screen should **NOT** be collected and Transfusion Medicine consulted for direction.
- 3. Collection of a Group and Screen must be done in accordance with the guidelines set by Health Canada, the Canadian Standards for Transfusion Medicine (CSTM) and the College of Physicians and Surgeons of British Columbia's Diagnostic Accreditation Program (DAP).

Need to Know

- 1. A Group and Screen is required for the transfusion of all human derived blood/blood products:
 - a. For red blood cells a Group and Screen is valid for 3 days where day of collection is day 0
 - i. Pre-Assessment clinic patients ONLY: a Group and Screen for red blood cells will be held for up to 60 days prior to the patient's surgery providing the patient was not pregnant and has not received a transfusion in the 90 days prior to the sample being taken. The sample will then be activated on the day prior to surgery and will expire 3 days thereafter If the patient received a transfusion or became pregnant in the interval between preassessment and surgery admission; then a new Group and Screen sample will be required on the day of surgery
 - b. For plasma and platelets a Group and Screen is required on the patient's current admission
 - c. For all other products a historic Group and Screen is required

This material has been prepared solely for use at Providence Health Care (PHC). PHC accepts no responsibility for use of this material by any person or organization not associated with PHC. A printed copy of this document may not reflect the current electronic version.

Effective date: 17/JUL/2023 Page 1 of 9

- 2. Before ordering a Group and Screen staff are required to check for an in-date result, which can be found under the results or handoff tool for Cerner transfusion history
- 3. If the patient has religious or cultural beliefs that would preclude them from receiving blood/blood products consult with the most responsible physician and, if needed, Hematopathologist to determine if the administration of blood/blood products would be considered prior to drawing Group and Screen sample
- 4. A Group and Screen should be collected **PRIOR** to the administration of emergency group O unmatched red blood cells whenever possible
- 5. The Phlebotomist (the person obtaining the sample) is responsible for correctly identifying the patient, with the patient, when able, collecting the sample according to practice guidelines, labeling the sample, and completing the required documentation
- 6. Transfusion Medicine requires positive patient identification for all Group and Screen collections. In instances when the patient is unable to identify themselves, an alternate (family member or another health care professional) must assist in identifying the patient by confirming the armband information.
- 7. In the instanced when electronic positive patient identification is **NOT** used, samples for Group and Screen testing MUST be accompanied by a paper requisition.
- 8. Unless otherwise indicated two 6 mL EDTA (tall lavender) tubes are required for testing
- 9. Incomplete and/or inappropriately labeled samples will NOT be processed/tested
- 10. Do Not collect a sample for Group and Screen until all patient ID discrepancies have been resolved

Equipment and Supplies

- 1. For Sunguest Collect: Workstation on Wheels (WOW) and wireless printer
- 2. For downtime or not Sunguest Collect: two downtime Cerner specimen (Lab) labels
- 3. Requisition (if not completing electronic requisition): Cerner generated or downtime version (Form ID 7747)
- 4. Two 6 mL EDTA tubes (tall lavender)
- 5. Phlebotomy equipment/supplies

Procedure

Steps

Electronic Positive Patient Identification: Sunguest Collect (Appendix A)

- 1. With the patient chart open in Power Chart or FirstNet, click the Sunquest Collect button, pair wireless printer and scan patient's identification band
- 2. Confirm that you have scanned the correct patient by unequivocally identifying the patient:
 - a. Ask the patient to spell full first and last name and say date of birth, compare to information on screen

This material has been prepared solely for use at Providence Health Care (PHC). PHC accepts no responsibility for use of this material by any person or organization not associated with PHC. A printed copy of this document may not reflect the current electronic version.

Effective date: 17/JUL/2023 Page 2 of 9

- b. If the patient cannot participate; an alternate (Family member, guardian or second health care provider not the collector) must identify the patient by comparing information from identification band to information on screen
- 3. Check the appropriate box on the RAR (Results at Request) screen to confirm patient identification; if alternate have person complete required information: printed first and last name
- 4. In the presence of the patient, verify that the patient's information: first and last name, date of birth and MRN matches exactly on the:
 - a. Patient identification band and
 - b. Sunquest Collect screen
- 5. Ensure both questions in the RAR screen are answered correctly then select "Apply" to print patient labels
- 6. Once labels have printed, Select "Done-Exit" to exit the RAR screen

Positive Patient Identification: not Sunquest Collect (Appendix B) or Downtime (Appendix C)

- 1. The patient is unequivocally identified:
 - a. Ask the patient to spell full first and last name and say date of birth, compare to information on identification band and requisition
 - b. If the patient cannot participate, an alternate must identify the patient by doing the same
- 2. Check the appropriate box on Group and Screen requisition to confirm patient identification; if alternate have person complete required information:, printed first and last name
- 3. In the presence of the patient, verify that the patient's information: first and last name, date of birth and MRN is legible and matches exactly on the:
 - a. Group and Screen requisition
 - b. Patient identification band
 - c. Specimen labels

Sample Collection: Collect sample as per appropriate DST

- a. <u>BD-00-12-40067</u> CVC: Tunneled Central Venous Catheter Basic Care and Maintenance (Adult)
- b. <u>BD-00-12-40045</u> CVC: Non-Tunneled Central Venous Catheter Basic Care and Maintenance (Adult)
- c. <u>B-00-13-10104</u> Hemodialysis: Central Venous Catheter (CVC) Blood Sampling
- d. Sunquest Clinical Collect Workflow CST Cerner

Labeling

- 1. All samples must be labeled in the presence of the patient
- 2. Labels must contain:
 - a. Patient's complete first and last name
 - b. Date of birth

This material has been prepared solely for use at Providence Health Care (PHC). PHC accepts no responsibility for use of this material by any person or organization not associated with PHC. A printed copy of this document may not reflect the current electronic version.

Effective date: 17/JUL/2023 Page 3 of 9

c. MRN

- 3. Label cannot be cut off, smudged or illegible; if time is critical a label can be hand amended
- 4. To affix label hold tube cap in left hand and place label on using right hand, apply label as close to top of tube as possible without covering the cap (Appendix D)
- 5. Double check the labels to ensure that the patient information on the labels is correct and complete prior to sending. Check against Sunquest Collect screen if using electronic Positive Patient Identification or the paper Group and Screen requisition if downtime collection is performed.

Documentation

Downtime or not using Sunquest Collect

- 1. In the presence of the patient complete required fields on the Group and Screen requisition:
 - a. Patient identification verified by section (if not already completed)

AND if by downtime method:

- b. Specimen collected on: date and time
- c. Specimen collected by: this is the phlebotomist (the person who collected the sample)

Appendices

Appendix A: Electronic Positive Patient Identification (Sunquest Collect)

Appendix B: Positive Patient Identification (Sunquest Collect **NOT** used)

Appendix C: Positive Patient Identification (Downtime Procedure)

Appendix D: Correct/Incorrect Tube Labeling

Effective date: 17/JUL/2023 Page 4 of 9

Appendix A: Electronic Positive Patient Identification (Sunquest Collect)

- GRS samples are DIFFERENT than other sample collections as they require a specific POSITIVE PATIENT IDENTIFICATION process
- Transfusion medicine will reject any samples that do not meet the regulatory requirement

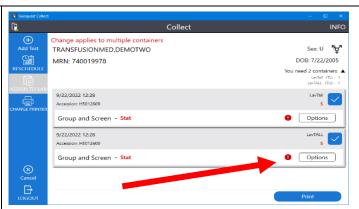

Step 1: Bring all collection supplies to the bedside including:

- WOW/MDC and bar code scanner
- Requisition (electronic) will appear once logged into Sunquest Collect

Step 2: In Sunquest Collect - Pair wireless printer with WOW and scan patient's ID band

Step 3: Select Samples to be collected

- Select GRS collection on RAR screen
- Click to advance to the electronic screening questions for Positive Patient Identification

Step 4: positively identify the patient

Complete all screening questions

- Ask the patient to say and spell their first and last name and give date of birth
- If patient identification provided by an alternate (family member, guardian or a second health care provider; unselect Option A and select Option B
- If selecting Option B enter Alternate name in the empty field

Result at Request INFO Group and Screen You have 2 question(s): 1. Did you follow site policy for positive patient identification? Yes, I confirm that I followed site policy for positive patient identification. No, I understand the sample will be rejected. 2. Patient identification provided by? A Patient (Self Identified) B. Alternate (family member, guardian, or second health care provider). Record alternate's full name.

Step 5: Collect samples and Label tubes

- Select APPLY once you have collected your specimens
- Label the tubes in the presence of the patient
- After affixing labels, check to make sure they are complete: first and last name, date of birth, MRN and match the Cerner banner bar and ID band
- Hand ammend if any information is incomplete

Step 6: Send the labeled tubes in a Biohazard Bag to the lab

This material has been prepared solely for use at Providence Health Care (PHC). PHC accepts no responsibility for use of this material by any person or organization not associated with PHC. A printed copy of this document may not reflect the current electronic version.

Effective date: 17/JUL/2023 Page 5 of 9

Appendix B: Positive Patient Identification (Sunquest Collect NOT used)

Step 1: Bring all collection supplies and requisition to the bedside

Step 2: Positively IDENTIFY the patient

- Ask the patient to say and spell their first and last name and give date of birth
- If the patient cannot do this (unconscious, language barrier) use alternate

Note: alternate can NOT be the collector

- Complete appropriate tick box
- Check that the information given by the patient/alternate matches the requisition AND ID band

Appendix C: Positive Patient Identification (Downtime procedure)

Step 1: Bring all collection supplies and requisition to the bedside

Step 2: Positively IDENTIFY the patient

- Affix patient label to requisition
- Check that the information given by the patient/alternate matches the requisition AND ID band by: Asking the patient to say and spell their first and last name and give date of birth
- If the patient cannot do this (unconscious, language barrier) use a Alternate

Note: Alternate can NOT be the same as the collector

Complete appropriate tick box
